PROFESSIONAL SUMMARY

Backend Developer with practical experience in Java and Spring Boot at UOL, working on the lifecycle of high-availability microservices. Expanding expertise into the Node.js/TypeScript ecosystem, applying Hexagonal Architecture, automated testing, Redis caching, and CI/CD pipelines with Docker across core projects. Strong focus on software engineering best practices: decoupled architecture, disciplined version control (Git Flow / Conventional Commits), and thorough technical documentation.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript.
- **Backend:** Spring Boot (Security, Data, Cloud), Node.js, Express, NestJS, Prisma, Hibernate, Kafka.
- **Frontend:** React, Next.js, Angular, Tailwind CSS.
- **Architecture & Quality:** Hexagonal Architecture, Microservices, Automated Testing (Vitest/JUnit), Swagger/OpenAPI, Clean Code, Git Flow.
- **Databases:** PostgreSQL, MongoDB, Redis.
- **Infrastructure & DevOps:** AWS (CCP), Docker, Docker Compose, CI/CD (GitHub Actions), Linux.
- **Languages:** English (C1 Advanced), Portuguese (Native).

PROFESSIONAL EXPERIENCE

- Backend Developer | UOL** May 2025 – Oct. 2025
Java, Spring Boot, Docker, Microservices
- Contributed to the development lifecycle of microservices operating under high-availability constraints.
 - Developed and maintained RESTful APIs and cross-system integrations.
 - Containerized development and production environments using Docker.
 - Collaborated within an agile squad, driving continuous delivery and disciplined Git versioning.

FEATURED PROJECTS

- Payment Gateway API** *Node.js, TypeScript, Express, Prisma, PostgreSQL, Redis, Docker*
- Payment processing API featuring asynchronous webhook gateway simulation and idempotency handling to prevent duplicate processing during race conditions.
 - Layered architecture (routes/controller/service/repository) utilizing manual dependency injection, Zod contract validation, and a custom error hierarchy linked to a global middleware.
 - Read caching via Redis, OpenAPI/Swagger documentation, and a Vitest test suite covering core business rules; reproducible environment built with Docker Compose.
- RootBarber | Barbershop Management & Scheduling Platform** *Java, Spring Boot, Next.js, PostgreSQL, Docker*
- Full-stack scheduling application featuring automated coupon generation and an admin dashboard with status filtering.
 - CI/CD pipeline built with GitHub Actions (parallel frontend/backend validation, Maven dependency caching, JUnit reporting) and automated container registry publishing via GHCR.
 - Production-level Dockerfile optimizations (multi-stage builds, Next.js standalone output, network segmentation) and resolution of concurrency/timezone bugs in JPA queries.
- PWNED | Cybersecurity EdTech Platform** *Java, Spring Boot, Docker*
- Backend structured using Hexagonal Architecture with polyglot persistence (PostgreSQL for transactional data, MongoDB and Redis for high-performance caching).
 - Streamlined development workflow based on Git Flow (feature, develop, release, and main branches).

EDUCATION

- Associate Degree in System Analysis and Development** 2023 – 2026
Federal Institute of Paraíba (IFPB) – Esperança Campus
- Technical High School Diploma in Computer Science** 2020 – 2022
Federal Institute of Paraíba (IFPB) – Esperança Campus

CERTIFICATIONS & ACHIEVEMENTS

- **AWS Certified Cloud Practitioner (CLF-C02):** Official Cloud Foundations Certification (2025).
- **EF SET English Certificate (C1):** Advanced Proficiency Level (2025).
